

Question number	Answer	Notes	Marks
5 (a) (i)	C (nuclear); A is incorrect because chemical reactions do not happen in the Sun B is incorrect because the kinetic store of particles increases during nuclear fusion D is incorrect because the thermal store of the Sun remains constant whilst fusion is taking place		1
(ii)	B (by radiation); A is incorrect because transfers by heating cannot happen in a vacuum C is incorrect because there is no electrical circuit or flow of ions D is incorrect because the transfer does not happen due to forces		1
(b) (i)	evaluation of total power / conversion of hours to seconds; evaluation of energy in J; evaluation of energy in MJ; e.g. power = $(1000 \times 15 \Rightarrow) 15\,000 \text{ (m}^2\text{)}$ OR time = $(2 \times 60 \times 60 \Rightarrow) 7200 \text{ (s)}$ energy = $(15\,000 \times 7200 \Rightarrow) 108\,000\,000 \text{ (J)}$ energy = $(108\,000\,000 \div 1\,000\,000 \Rightarrow) 108 \text{ (MJ)}$	allow $\times 3600$ seen anywhere in working	3
(ii)	substitution into $\Delta Q = m \times c \times \Delta T$; rearrangement; evaluation of ΔT ; evaluation of final temperature; e.g. $100\,000\,000 = 1100 \times 4200 \times \Delta T$ $\Delta T = 100\,000\,000 / (1100 \times 4200)$ $(\Delta T \Rightarrow) 22 \text{ (}^\circ\text{C)}$ $T = (20 + 22 \Rightarrow) 42 \text{ (}^\circ\text{C)}$	-1 for POT error allow ECF from incorrect ΔT allow 23.3..., 21.6... allow 41.6-43.8 ($^\circ\text{C}$)	4
(iii)	any sensible suggestion; e.g. <ul style="list-style-type: none"> heating process is not 100% efficient energy also heats up pipes / not all energy is transferred to water some energy is transferred to the surroundings power of Sun may change 	allow energy transferred to (solar) panel ignore 'heat is lost'	1

Total for Question 5 = 10 marks
