

**15 (a)** Parachutes are used to slow down a spacecraft as it falls through the atmosphere.

Photograph **G** shows an Apollo spacecraft with three parachutes attached.

Photograph **G**

This spacecraft falls at a constant velocity.

(i) State the name of this constant velocity.

(1)

(ii) Explain why this velocity stays at a constant value.

(3)

- (iii) Photograph **H** shows an identical Apollo spacecraft. Only two of its parachutes are working.

Photograph **H**

Explain how the constant velocity reached by this spacecraft compares with the constant velocity of the spacecraft shown in photograph **G**.
