Question number	Answer	Notes	Marks
5 (a) (i)	amplitude decreases (with distance); wavelength is constant; speed is constant;		3
(ii)	A (there was a time delay for signals travelling to the probe from Earth);		1
	B is incorrect because although the statement is correct it does not explain why the probe is difficult to steer C is incorrect because although the statement is correct it does not explain why the probe is difficult to steer D is incorrect because it contains incorrect Physics		
(iii)	C;		
	A is incorrect because all radio signals travel at the same speed B is incorrect because all radio signals travel at the same speed D is incorrect because it is easier to remove noise from a digital signal		
(iv)	B;		1
	A is incorrect because the signal shows varying amplitude with more than two values C is incorrect because the signal shows varying amplitude with more than two values D is incorrect because the signal shows varying amplitude with more than two values		
(b)	substitution; evaluation;		2
	e.g. (power =) 36.4 × 0.275 (power =) 10.0 (kW)	allow 10.01, 10	

Question number	Answer	Notes	Marks
(c)	dimensionally correct substitution;	no marks for equation as given in paper	3
	rearrangement; evaluation;	substitution and rearrangement in either order	
	e.g.		
	0.091 = <u>change in momentum</u> 25 x 60		
	(change in momentum =) 0.091 × 60 × 25 (change in momentum =) 140 (kg m/s)	allow 136.5, 137	
		unit conversion error or POT error loses the evaluation mark e.g. 2275, 2.275,	
		136 500, 1.365 x 10 <sup>11</sup> scores 2 marks	

Total for Question 5 = 11 marks
