So	cho sounding is used to detect fish in the sea		
	eno sounding is used to detect hish in the sea	•	
by	ound waves are emitted from a fishing boat. y fish and detected back at the boat.	Some of the sound waves are reflected	ed
(a	a) The shortest time between the sound wave	es being emitted and detected is 0.26	S.
	The speed of sound in water is 1.5 km/s.		
	Calculate the distance between the boat ar	nd the nearest fish.	(4)
		distance =	m
(b	b) Each sound wave is emitted for a very shor	t time.	
	The reflected sound wave received at the b	ooat lasts for a longer time.	
	Suggest a reason for this difference in time	<u>.</u>	(2)
	(Total for Question 6 = 6 marks)		narks)
